October 1, 2025

As the NBA grows in an abundance of performance metrics and world coverage of the game. Those who “General Manage” an NBA team can display “tendencies and actions” that can be measured and analyzed by performance metrics and relationships. By using the methods presented you can “forecast” trends and actions that are leading to success. For ex: we may identify recurring tendencies and outlier tendencies of successful GMs with added parameters to ensure a precise consensus on the relationships and models built. These methods, relationships, models, prompts(ai,llm) provide insight and assisted ways to conduct decision making as a GM. These decisions will become fact, and data driven through the methods outlined with many combinations of analysis that may be provided to a TMT(Top Management Team). These are modern methods meant to provide teams with a methodology of applying changes to their organization to improve performance in any area.
